

Waste Management and Assessment

Waste policies, strategies and technologies are one of the most rapidly changing rapidly areas of environmental management. They require a clear understanding and an integrated approach to solutions.

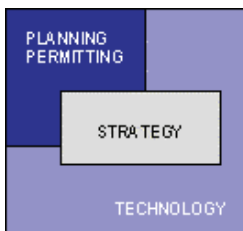

In a change of thinking, waste is now considered to be a major resource having direct implications on the way we manage and assess the issues.

Pinnacle Associates are ideally placed to help meet these challenges.

Our specialists have industry and government (Defra New Technologies Demonstrator Programme) waste management expertise grouped into three key categories:

- Waste technology
- Waste planning and permitting
- Waste strategy and stakeholder management

Our thorough understanding of the environmental regulations and the critical issues that can affect our Clients' costs and liabilities differentiate and add value to our approach.

Furthermore, our expertise in project management and risk assessment enable us to develop effective strategies and solutions that consider all the crucial subjects, such as safety and public health.

We assist private and public sector Clients in:

- Compliance and Permits
- Project management
- Sustainability appraisal
- Waste treatment technology review
- Stakeholder engagement
- Collection schemes
- Waste minimisation
- New product markets
- Hazardous waste management
- Solid waste management
- Landfill Allowance Trading assessment
- Communications
- Auditing
- Site waste management plans
- Market research
- Recycling initiatives
- Waste electrical and electronic equipment
- Restricted substances
- Packaging waste
- Noise surveys
- Management systems
